

Veaceslav Turcanu

Python Backend Engineer | Linux & IoT Systems

SUMMARY

Python Backend Engineer specialized in backend services for Linux and embedded systems. Experienced in designing microservices, async applications, CI/CD pipelines, and system-level integrations.

EXPERIENCE

Python Web Backend Developer

SmartSoftDev | May 2022 - December 2025 (3 years 8 months)

Projects

- Embedded Device Web Portal - Web application for a specialized hardware device, utilizing React for the frontend and Sanic Web framework for the backend.
- System Configuration Utility - Web application responsible for managing and configuring a background system daemon, using React for the frontend and Sanic Web framework for the backend.
- IoT Hardware Migration - Software building, system migration from legacy ARMv5 IoT devices to modern ARMv7 hardware platforms, and integration testing on target devices.

Responsibilities

- Developed backend services for embedded devices using Sanic and asyncio
- Integrated socketIO
- Developed and implemented client-side features using React+MUI, improving responsiveness and user interaction
- Built CI/CD pipelines with Azure DevOps
- Automated testing using pytest and Robot Framework
- Worked with ARM-based IoT devices and Linux systems

Full stack Developer

Personal Project | October 2025 - December 2025

Projects

- Dental Tech Register (DTR) - Web application for managing work-order records. Technicians can register, log in, and maintain their own records (description, work started/finished dates, completion status). Built with a Django REST backend and a React (MUI) frontend, orchestrated with Docker.

Responsibilities

- Implemented user authentication (registration, login, logout)
- Created CRUD functionality for records
- Designed database models using SQLite
- Developed REST APIs using Django REST Framework

FE Developer

Personal Project | September 2025

Projects

- Route Calculator - A React SPA that lets users select two points on a map(OSMR), calculates the distance(Leaflet / react-leaflet) and travel price, and generates a QR code(qrcode.react) linking to a Stripe payment form.

Responsibilities

- Implemented SPA application

Python Backend Developer

SmartSoftDev | June 2020 - April 2022 (1 year 11 months)

Projects

- Enterprise CRM & SSO Portal - Implemented a Customer Relationship Management web application featuring advanced Single Sign-On (SSO) integration.
- Secure Remote Connectivity Tool - Complex infrastructure project providing secure SSH connections to remote physical devices.

Contact

📍 Hîncești, Moldova
✉ turcanuslavik1986@gmail.com
☎ +373 698 76312

Core Skills

- Python
- Asyncio / Sanic
- Linux
- Docker / CI/CD
- pytest
- PostgreSQL
- React
- MUI

Languages

- Romanian
- English
- Russian

- Core Microservices Infrastructure - Developed and optimized a set of high-performance microservices focused on data validation and contact processing, built with Python and Asyncio using the Sanic framework.

Responsibilities

- Implemented SSO logic and integrated web services into a central CRM portal using Python and Sanic.
- Developed secure SSH connectivity features for remote devices, managing complex TCP/IP and SSL configurations.
- Refined and scaled Python-based microservices, utilizing Asyncio to ensure high performance under heavy client loads.

Python Backend Developer

ITSYSTEMS | November 2018 - January 2019 (3 months)

Responsibilities

- Implemented Django REST API
- Built web scraping tools using Scrapy and BeautifulSoup

Junior Python Backend Developer

SmartSoftDev | December 2017 - May 2018 (6 months)

Responsibilities

- Contributed to the FTU (First Time Use) flow, ensuring a seamless initial setup and hardware-to-software orchestration for new users.
- Developed and tested OTA (Over-the-Air) update mechanisms, managing secure firmware delivery and system stability.

Entry-Level Python Developer Intern

SmartSoftDev | May 2016 - December 2016 (8 months)

Responsibilities

- Assisted in debugging and testing code, improving overall software reliability.
- Collaborated with the development team on project requirements and implementation.
- Gained hands-on experience with Python libraries such as Falcon, Celery, Jschema.

Laboratory Assistant

USMF (Centrul de Cultivare a Plantelor Medicinale) | December 2009 - January 2014 (4 years 2 months)

Responsibilities

- Maintenance and expansion of the medicinal plant collection.
- Materials Coordinator.

CERTIFICATIONS

- PCAP - Certified Associate in Python Programming
- Certified SSAFE 6 Practitioner
- JavaScript Algorithms and Data Structures
- Relational database

EDUCATION

• Moldova State University

Faculty of Biology and Pedology - Ecology and Environmental Protection

September 2004 - May 2008
